

Algae Bloom Remediation Workshop

Open Collaboration + Innovation = Algae Bloom Remediation

May 21-22, 2019 (Tues. & Wed.)
Broward County Library Downtown - Auditorium
100. S. Andrews Ave, Ft. Lauderdale 33001

The algae bloom situation is affecting tourism, fishing, real estate and local economies. While algae bloom research, testing and monitoring is ongoing within the State of Florida, collaboration and open communication on fixing the existing algae bloom and HAB problems need to be addressed. National Algae Association is the first non-profit algae association to focus on education, production and algae bloom remediation in the world, made up of commercially-minded algae researchers, producers as well as algae bloom remediation technology experts and equipment companies in the US and throughout the world, would like to extend an invitation to your organization to attend or become a sponsor for our Algae Bloom Workshop in Ft. Lauderdale, May 21-22, 2019.

The National Algae Association has invited commercially-minded algae bloom researchers, remediation technology and equipment companies to discuss differences between algae blooms created by phosphorous and nitrogen as well as toxic hazardous algae blooms (HAB's) and educate attendees about potential algae bloom remediation technologies and solutions proven outside the lab are scalable and have a low CAPEX. The response has been overwhelmingly positive.

Agenda

(Tuesday, May 21)

- 9:00-9:30 Innovation Through Citizen Science and Outreach, Tracy Fanara, E.I., Ph.D Program Manager, Environmental Health Mote Marine Laboratory”
- 9:30-10:00 “Modern Instrumentation and Laboratory Approaches for the Modelling and Remediation of Algae Blooms and Red Tides, T Alavosus, Ph.D., and A. Spicer, Ph.D., Algenuity
- 10:00-10:30 “Mitigation of red tides and other HABs using modified clay; present status and future challenges”, Donald Anderson, Senior Scientist, Biology Department at the Woods Hole Oceanographic Institution. (
- 10:30-11:00 Break
- 11:00-11:30 “The interaction of flood control strategies with a *Lyngbya wollei* bloom in Lake Wateree SC: consequences of draining the lake.” John Ferry, Ph.d., Oceans and Human Health, University of South Carolina

- 12:00-12:30 "Archaea-based Biomimetic Remediation: The Unexpected Path from Hydrocarbons in Retention Ponds to Algae Overgrowth on Agricultural Irrigation Ponds." Kevin Mirise, Managing Partner, Akaya
- 12:30-1:00 "All-Natural Water Treatment System that remediates organic pollutants and more." Keith Boulais, CEO, Premier Materials Technology, Inc.
- 1:00pm-2:30 – Lunch and Networking)
- 2:30- 3:00 "The Power of Many – Collective Action through 4R Nutrient Stewardship." Adam Herges | Sustainability Agronomist, Corporate Public Affairs, The Mosaic Company
- 3:00-3:30 Monitoring, Predicting, Preventing and Controlling of (Toxic) Cyanobacteria Blooms in Lakes and Reservoirs, Lisa Maria Brand, CTO, LG Sonic
- 3:30-5:00 Open Discussion and Networking

Wednesday, May 22

- 9:00-9:30 "Innovation Through Citizen Science and Outreach" Tracy Fanara, E.I., Ph.D Program Manager, Environmental Health Mote Marine Laboratory
- 9:30-10:00 "Modern Instrumentation and Laboratory Approaches for the Modelling and Remediation of Algae Blooms and Red Tides." T Alavosus, Ph.D., and A. Spicer, Ph.D., Algenuity
- 10:00-10:30 "Mitigation of red tides and other HABs using modified clay; present status and future challenges." Donald Anderson, Senior Scientist, Biology Department at the Woods Hole Oceanographic Institution.
- 10:30-11:00 Break
- 11:00-11:30 "The interaction of flood control strategies with a *Lyngbya wollei* bloom in Lake Wateree SC: Consequences of Draining the Lake." John Ferry, Ph.d., Oceans and Human Health, University of South Carolina
- 12:00-12:30 "Archaea-based Biomimetic Remediation: The Unexpected Path from Hydrocarbons in Retention Ponds to Algae Overgrowth on Agricultural Irrigation Ponds." Kevin Mirise, Managing Partner, Akaya
- 12:30-1:00 "All-Natural" Water Treatment System that remediates organic pollutants and more." Keith Boulais, CEO, Premier Materials Technology, Inc.
- 1:00-2:30 Lunch and Networking
- 2:30- 3:00 "The Power of Many – Collective Action through 4R Nutrient Stewardship." Adam Herges, Sustainability Agronomist, Corporate Public Affairs, The Mosaic Company
- 3:00-3:30 "Monitoring, Predicting, Preventing and Controlling of (toxic) Cyanobacteria Blooms in Lakes and Reservoirs LG Sonic, Lisa Maria Brand, CTO
- 3:30-5pm Open Discussion and Networking)

(subject to change)

Areas of discussion:

1. Differences between algae blooms and HAB's
2. Existing Algae Bloom Testing and Monitoring
3. Commercial algae bloom technologies proven outside the lab and scalable.
4. Collaboration opportunities between algae bloom researchers and private industry.
5. Pilot tests and monitoring progress on remediation/dewatering methods
6. Potential co-products made from algae blooms.
7. Current state and federal legislation in the State of Florida
8. Funding available for remediation.

Sponsorship:

\$1500 – Company recognition on our website, membership in NAA's exclusive 'Dealing With Algae Blooms' and inclusion in all advertisements for the Workshop and two attendee passes to the Workshop.

\$250 - Attendance fee. Online Registration www.nationalalgaeassociation.com
