

Algae Bloom Remediation Technology Licensing Available

“Aerosolization” IP cluster (captures and precipitates or removes overloading particles, greatly and continually oxygenates the water, creates a substantial and consistent sub-current, allows for “site specific and remediating aqueous solutions” to be added to the Aerosolization process to further address Algae remote from the shoreline) would directly address all types of Algae.

Last week I signed a CRADA with the USACE-ERDC-EL titled “On-site Aerosolization of all wastewaters” and believe that this vehicle would be helpful to the nation to move many questions from discussion to deployment. Please see the attached US Govt. “Capabilities Statement”.

“Aerosolization” is a medically understood “particle capture with atmospheric disposal of the cleaned water vapor” technology now transferred to the wastewater treatment and final disposal professions.

licensing various heavy equipment makers to create and customized a family of new “Integrated Mobile Aerosolization Systems” and am seeking firms that wish to operate these new lines of equipment on licensed owner sites.”
